WOUND
CARE PROGRAM

ThriveAhead.com

THE GOALS OF OUR WOUND CARE PROGRAM

- Decrease pain and infection
- Provide education on wound care management during and after rehab stay
- Increase ability to participate in activities and personal care
- Decrease any unnecessary hospitalizations
- Increase comfort and overall quality of life

STATE OF THE ART THERAPY TECHNOLOGY

UltraMIST® System delivers low-frequency sound waves to penetrate tissue for deep healing while it applies a fine-mist saline solution topically to cleanse the wound and prevent bacterial infection. The innovative dual approach of this clinically proven treatment activates the body's natural regeneration process to promote and accelerate wound healing. In patient studies, the rate of wound closure increased from 24 per cent with standard care to 43 per cent with **UltraMIST®** use over a 12-week period, resulting in faster relief and better quality of life.

Air Fluidized Therapy Beds – provide an ideal healing environment for compromised skin. They accelerate wound healing by minimizing the forces that cause tissue breakdown, including pressure, friction, heat and moisture. **Clinitron®** beds also increase patient comfort while they support faster healing.
